

This PeerStory is a collection of quotes from a real user sharing their experience using Mend.io on PeerSpot.

Bruno Lavit

Release Manager at ForgeRock

Use Case

We are using Mend.io to **detect and fix vulnerabilities** in our products and we also use it to deliver security reports when we are releasing our products.

Valuable Features

What is very nice is that **the product is very easy to set up**. When you want to implement Mend.io, it just takes a few minutes to create your organization, create your products, and scan them. It's really convenient to have Mend.io scanning your products in less than one hour.

Results

Since we moved to Mend.io, a long time ago, everything has been fully automated and **we are saving a lot of time**. When it comes to MTTR, we are saving three to four weeks of work over the course of a year.

“Thanks to the integration we put in place, it’s super easy to identify and remediate open-source vulnerabilities.”

“ Mend.io also has a lot of automation, such as raising pull requests on your code to implement updates. That’s a pretty significant gain for our company, not having to manage that anymore.”

ROI

In terms of resources, we are **saving 15 percent of our time when remediating issues**. And for our company, there is a big financial gain because people can work on multiple projects. And most importantly, we know we are not delivering products with high CVEs, which makes it safer for our customers.
