

Mend AppSec Platform

Proactive application security with a single holistic solution

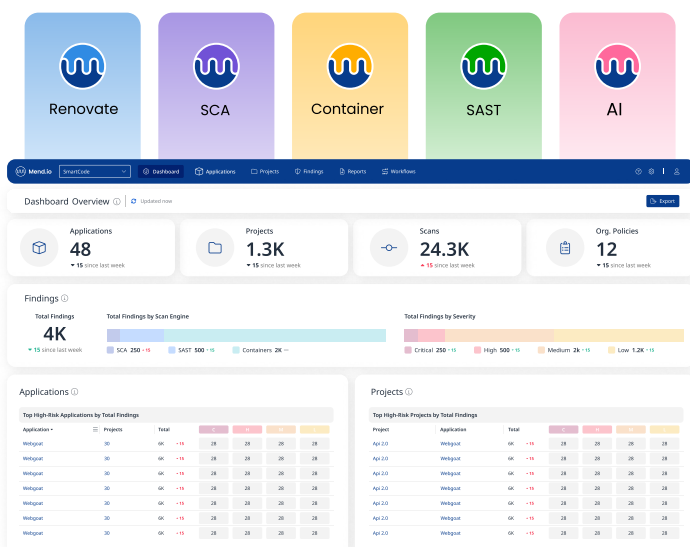

The Challenge

The increasing volume of application-layer attacks makes it essential to manage security risks throughout the software development process. As a result, the market has shifted from an early focus on compliance to today's risk based approach, which requires a holistic view across applications. However, current security tools do not meet that need. Most companies are stuck with a siloed and complex technology array leading to blind spots, vulnerabilities, and slow remediation times. To create that comprehensive view, companies need a proactive and preventative approach that integrates application security into the development process from the start.

The Solution

For companies to have true and complete visibility into security risks, they need access to a variety of application security tools within a single platform. The Mend AppSec platform provides companies with that single-pane visibility, helping them to effectively address risks associated with custom code, open source components, containers, and even AI models. All in one platform, at one price.

Trusted by the world's leading companies, including IBM, Google, and Comcast, Mend.io offers a full-spectrum application security platform designed to help leading organizations build and manage mature AppSec programs, enabling them to stop chasing vulnerabilities and start proactively managing application risk

Why the Mend AppSec Platform?

Automate dependency updates

Proactively reduce up to 70% of vulnerabilities from your code base by automatically identifying outdated dependencies and generating pull requests enriched with crowdsourced update insights.

Spotlight true risks based on risk level

Gain deeper insights into vulnerability risks with CVSS 4 severity ratings and EPSS exploitability data, using advanced reachability analysis to prioritize the highest-risk vulnerabilities.

Gain full visibility and control

Get a holistic view of your entire open source risk picture, from licensing and compliance to security posture and remediation backlogs.

Deploy fast, at scale

Implement the Mend AppSec Platform for thousands of developers in less than an hour, across all applications in development.

Lower developer burden

The Mend AppSec Platform is a security solution your developers will actually use, with fast and automated workflows that don't require switching tools.

Automate remediation

Automatic pull requests enable developers to fix security and licensing issues with a single click.
